North Macedonia

Linking Biodiversity Finance to Measurable Results

Results

North Macedonia's main biodiversity finance challenge lies in the gap between strong national strategies and limited implementation capacity.

While policy frameworks exist, the country still needs stronger financial instruments, better impact monitoring systems, and greater institutional capacity, particularly among protected area authorities.

Strengthening Policy Framework and Integration

Opportunities exist through innovative financing instruments, stronger policy alignment, and improving project bankability to unlock additional national and international funds.

Priority Investment Needs 2026-2030

Develop biodiversity finance instruments and tracking systems

BIOFIN support is currently focused on the analytical work and design of a national Biodiversity Finance Plan, helping lay the foundation for more strategic, transparent and results-oriented biodiversity finance.

Strengthen biodiversity finance through instruments such as a green biodiversity bond, a Green/Nature Fund, and biodiversity budget tagging

Better alignment of resources with biodiversity priorities; improved tracking of biodiversity-related public expenditure; stronger basis for mobilizing public, private, donor and international finance
